Complete visibility of performance – respond in real-time

- Plant floor scoreboard – XL800 enables operators to see performance in real-time and make adjustments in real-time.
- Web-page interface – real-time performance and historical trend analysis available across your network.
- Dashboard screens – link multiple XL800s together, via the web-page interface, to see performance across your entire plant and even multiple sites.

Real-time, accurate, reliable tracking of downtime

- XL800 automatically knows when your machine is running and when it is down, giving you genuine, reliable data to drive your decision-making.
- Track your changeovers, set targets, see real-time performance to that target, review trended information for further improvement.
- Instant management data – real-time visibility, historical analysis and exportable management reports by shift, job and product type all provide powerful data for your tactical and strategic decision-making.

Truly bolt-on – to any machine

- Add just two signals to give you accurate OEE and more than 100 performance metrics. Just provide a run signal and a reject signal and you are ready to go.
- All software is built-in, nothing to load onto PCs, all access is through the web page interface in the scoreboard. Connect it to your network and everyone has access!
- Handles multi-product lines, multiple run rates, and pack size changes.

Easy to use

- Self-configured and managed, XL800 works straight out of the box, plus it is fully configurable for your changing needs.
- Minimal operator involvement – integrated barcode scanner enables quick and easy logging of downtime reasons, changeover periods, product changes as required.
- FREE telephone and web support for the installation, configuration and integration of your unit throughout your journey.

Our technical and operational experts will share best practice with you from more than 8000 installations across 36 countries.

Since 2001, LineView Solutions' combination of Lean Six Sigma expertise, Operational Management experience, and systems development capability has helped some of the best known names in manufacturing to improve productivity. Embedding XL800 into your way-of-working will provide the catalyst for on-going and sustainable improvement.

XL800 delivers 22% productivity gain

So far this year, we have achieved 22% improvement in OEE and XL800 has been an integral part of our improvement process. By knowing the status of all of our lines in real-time, we can address problems in real-time. We count on XL800 to show us what areas we need to address, and we take immediate action from there.

M.H., Plant Manager, Personal Care and Household Products

Developed by Operational Experts, XL800 is easy to install, simple to use, and extremely powerful when employed in regular performance reviews. XL800 and LineView Solutions will support you wherever you are on your improvement journey. See more at www.lineview.com.
