

OPERATIONAL AUDIT

PRACTICES

GET BACK TO BASICS WITH A THREE-DAY OPERATIONAL AUDIT

An operational audit examines the manufacturing processes from a different angle to your operations team. We see where their issues really are, not where they think they are.

OPERATIONAL AUDIT

BEST FOR:

INSTANT VISUAL AND
ACTIONABLE INFORMATION.
REAL-TIME OVERVIEW OF LINE
PERFORMANCE.
INSTANT VISIBILITY OF THE
TOP LOSSES.
BUILT-IN TACTICAL
REPORTING.
LOSS TO BOTTLENECK
ACCURATELY ALLOCATED.

Get back to basics with a
three-day operational audit
on your manufacturing
operation.

Like most factories, you regularly undergo audits for safety, quality and financial performance. When did you last do the same for your operational health?

For rapid analysis and visibility of top losses and data accuracy throughout the audit process, we use RapidView – manufacturing intelligence delivered in rugged, IP rated hardware.

Before you can decide where you are going, you need to know where you are.

Your Three-day Opportunity Analysis will answer the following:

- ✓ What drives most cost in your business?
What are the biggest opportunities?
- ✓ How well is your data understood?
- ✓ How often do you review information to determine focus areas?
- ✓ How effective are your operations meetings and daily routines?
- ✓ How effective are your actions to reduce loss?
- ✓ What is the depth of knowledge in manufacturing and continuous improvement in your factory?
- ✓ How accurate is the data that you use to make decisions?

To assure data accuracy throughout the audit process, we use RapidView – a portable solution for instant performance data gathering and visualisation.
