

**EFFICIENCY
PREMIUM FEATURE**

IOT VIDEO FOR MACHINE FAULT PLAYBACK & ANALYSIS

Simplify root cause analysis on high speed lines with instant video replay. CamView™ records video clips of faults and stoppages that can be easily accessed from your efficiency monitoring system. Replay at slow speeds to quickly spot the underlying cause of faults.

CamView

CamView™ records video clips of faults and stoppages that can be easily accessed from your efficiency monitoring system.

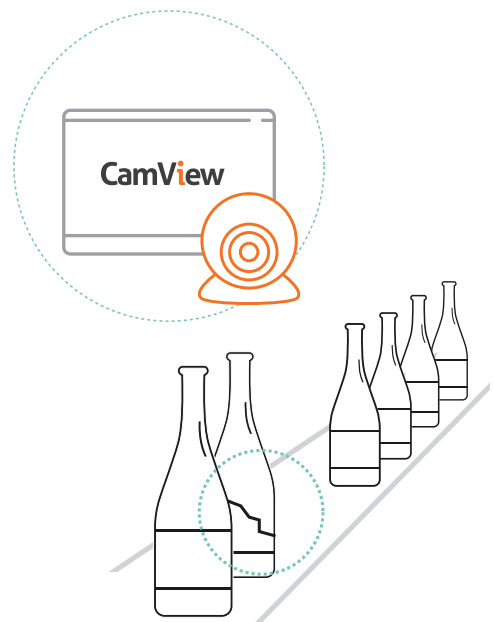

When a machine fault occurs on a high-speed line, fixing the problem is the focus but teams need to understand the true root cause of the event.

As a visual aid for machine fault analysis, CamView™ automatically collects and trims footage before and after the fault. Teams can access video through LineView to better understand the true cause.

CamView™ can also be used to troubleshoot areas of concern or improvement as identified by LineView™. Operators can position on various machines, anywhere on the line without the the aid of special lighting, lens or a visual technician

Simpler, faster root cause visualisation:

- ✓ **Instantly diagnose root cause of downtime**
See the root-cause with video playback of machine faults with IoT-enabled technology
- ✓ **Use less labour to troubleshoot and find efficiencies**
No need to stand and watch to troubleshoot root cause. Video clips are automatically available for playback within your existing LineView™ system.

Portable, easy to install and wi-fi enabled. Includes:

- LineView Custom Camera Device
- Camera controller batteries
- Wireless access transmitter and controller
- Mounting arm, extension and quick release clamp
- Cable pack

Pre-requisites:
LineView™ or MachineView™ system
