# THE SOLUTION FOR
DIGITISING OPERATIONAL PROCESSES

DigiView

STANDARDS

Transform all production checks from laborious spreadsheets/paper based process into a digital Industry 4.0 ready process with DigiView™ and gain valuable insight into the shift operations that can be shared across the enterprise.

DigiView

DigiView™ stores all inspection data and provides a historical record of compliance evidence, as well as performance data that you can use to audit your processes.

Use DigiView™ for:

- Traceability

- Safety checks

- TPM / CIL / Autonomous maintenance checks

- Quality checks

- Manual waste data gathering (units scrapped – manually weighed and counted and added to system)

- Site based utility checks (e.g. water treatment/boiler/ compressor) *and more!*

Easily configurable checks

Tactical and strategic analysis

Instant performance feedback

Operator alerts when checks are due

Benefits & Notable Features

✓ Define the check procedure, result type and frequency with a self-configurable platform

✓ Get a control station timeline summary identifying checks as: completed and the result, in progress, scheduled or requires recheck

✓ Enable compliance follow up with a live shift based history for each control station and associated check

✓ Strategic reporting and trend analysis through cloud based data visualised via BI tool

✓ Configurable red/amber/green status for control station and check result status indication

✓ Configurable KPIs

✓ Material traceability through ID/Lot barcode scanning capability

✓ Product and shift team recording per check
