PROPERLY USED TO IMPROVE
LINE EFFICIENCY

Maximise results and speed
ROI with LineView System
Training and Implementation
Support.

You have great production data and an understanding of where your losses are. Do you have the routines to maximise your results and speed up the ROI?

Ensuring the entire team is committed to the project and has the necessary skills and knowledge, our team will reinforce the IFA methodology. Built into the core of everything we do, these three steps are proven to deliver results:

- **Information** – do we have the right data?
- **Focus** – are we using it in the best way possible?
- **Action** – are the actions we are taking effective?

As an additional success mechanism, the LineView Governance Tool will track your team's progress and achievement against each of the elements that contribute to results. This ensures core competencies are measured, and improvement towards excellence tracked across all success factors.

Project governance guarantees
results through system
implementation:

- ✓ The LineView Governance Tool provides a comprehensive visualisation of progression towards agreed goals based on best practice.
- ✓ Agreed in advance, the Governance Tool forms a live project tracking device for continuous assessment of progress throughout the LineView implementation
- ✓ Tracking of progress against core elements contributing to results

Typical sessions include System Accuracy and Use Assessment; Management Review Assessment; LVS Management Audit; Culture and Alignment Audit; Skills and Knowledge Assessment and Sustainability and Internal Audit.
